

# Sprays Guide

## Fine-Tuning Your Regimen

### Sprays in the CARTA System

Sprays act as volume knobs for an existing capsule baseline.

They allow small, timed adjustments to intensity without requiring a full additional capsule.

### Universal Booster

The Universal Booster is a non-THC spray designed to gently enhance calm, clarity, or comfort.

It can be used across multiple capsule profiles when a little extra support is needed without intoxication.

### THC Stacker

The THC Stacker is a carefully dosed THC add-on used when more intensity is appropriate.

In the dosing engine, when both capsules and sprays are part of the plan, the Stacker spray is favored over adding a second PM capsule as tolerance grows.

## Practical Guidance

Start with one spray, wait to assess, and log effects.

Avoid combining THC sprays with alcohol or sedatives, and never drive after use.

## Key Takeaway

Sprays give granular control over timing and intensity—use them as precision tools layered onto a stable baseline.
